

Power and Bypass Humidifiers

Whole-home moisture and comfort control

Dry air can get under your skin

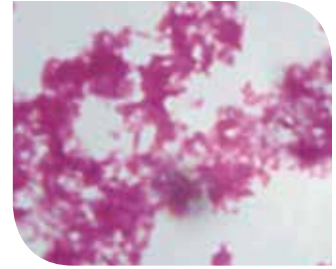

Dry Skin

Static Electricity

Wood Cracking

Viruses

Raise humidity levels to increase your comfort

Dry air can make you itch, cause nosebleeds and trigger annoying static shocks. Some studies have shown that low humidity in the home can allow viruses to hang around longer. A Complete Comfort™ humidifier offers an easy way to add humidity to the air in your home, so you can be more comfortable and possibly even save money on your utility bills.

Complete Comfort™ Power and Bypass Humidifiers

Optimum Moisture Balance

- Moisture added to the air as necessary for enhanced comfort
- Power humidifier comes equipped with a built-in fan that helps circulate humidified air, even when your heating and cooling system isn't running
- Bypass humidifiers work with your central air system, utilizing the air handler or furnace fan to circulate humidified air throughout your home

A Complete Solution

- Seamless integration with your home's central heating and cooling system
- Simple and out-of-sight installation
- None of the mess and inconvenience of refilling portable units
- Possible energy savings from lower thermostat settings

Signs of low humidity

- Chapped lips and dry skin
- Shocks from static electricity
- Sore throat and irritated nasal passages
- Aggravated allergies and respiratory problems
- Feeling cold even at normal indoor temperatures
